PUP_ATN24C_T2R4

PUP_ATN24C_T2R4 (Figure 1) is a MIMO radar antenna. It works at K band for two transmitting and four receiving channels.

Two transmitter antennas and four receiver antennas are configured as MIMO array (Figure 2). Eight signals can be virtually extracted from the receivers using the orthogonality of the transmitted signals, thereby obtaining a finer spatial resolution compared to its array counterpart.

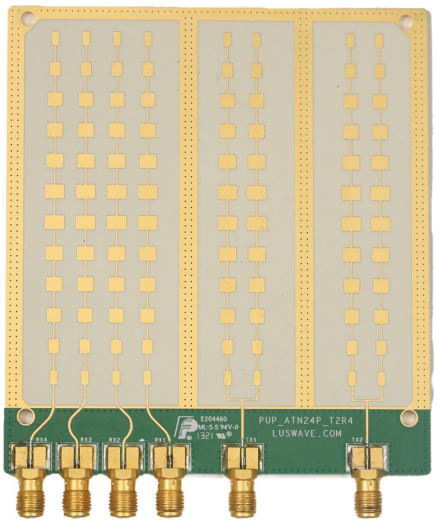

Figure 1. PUP_DUAL24P_T2R4

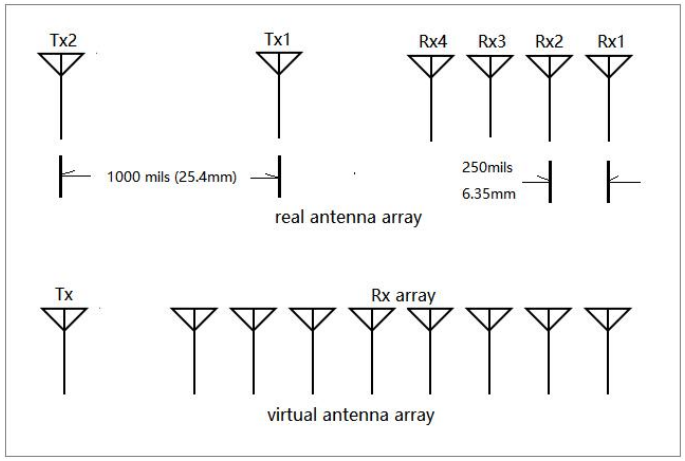

Figure 2. Antenna array

The antenna works between 23.5GHz and 24.5GHz and is expandable to 26GHz.

SPECIFICATIONS

Gain	**23.5GHz-24.5GHz**	**8.5dB**
	24.5GHz-25GHz	**7.5dB**
	25GHz-26GHz	**6.5dB**
connector	**SMA Female**
